

DEDICATED TO SUPPORTING YOUR BUSINESS

THE REQUIREMENT

OnePoundWebHosting (OPWH) is a Hampshire-based provider of affordable XEN VPS, WebHosting (Shared and Reseller), Servers, Domain Names and clustered monitoring. They had previously used colocation services from a different South Coast Data Centre, where they suffered a number of outages and interruptions. OPWH sought a local firm with a higher quality and more reliable service.

THE SOLUTION

OPWH came across ServerHouse and found them to be competitive, local and a 'hidden gem' in the market. Their power offering is extremely robust; normally sub-stations are fed by rings which are in turn connected to larger sub-stations, but ServerHouse have sited themselves on a regional distribution boundary, so have sub-stations on two totally independent rings of the national grid. This means that when there is a local or regional fault, one side remains live, making an outage extremely unlikely. To suffer a complete power cut on both sides at the same time would require two separate faults or a national outage. In addition to this, ServerHouse have multiple UPS's and backup generators with 10 days fuel.

"The quick, friendly and professional support provided at ServerHouse made moving my business to their datacentre a breeze. They offer plenty of scope to expand as my business grows and with such an easy to access location I will be here to stay"
